

Jinhao Hu

Seattle, WA | hjinhao066@gmail.com | +1 (206) 670-7564 | [linkedin.com/in/jinhao-hu-uw](https://www.linkedin.com/in/jinhao-hu-uw)

CORE SKILLS

Languages & Frameworks: Python (Pandas, NumPy, Scikit-learn), SQL (Advanced Querying), R, JavaScript
Data Engineering & Cloud: Snowflake, Airflow, dbt, Data Warehousing, ETL Pipelines, AWS, Docker, Git
Analytics & Visualization: Tableau, Power BI, Google Analytics, Excel (Pivot Tables, VLOOKUP/XLOOKUP), A/B Testing
Business & Operations: KPI & Metric Design, Workflow Optimization, Data Storytelling, Cross-functional Collaboration

EDUCATION

Master of Science in Information Management | University of Washington Jun 2027
Specialization: Data Science & Business Intelligence

Bachelor of Science in Information Management | University of Delaware GPA: 3.89/4 Jul 2025
Minor: Business Analytics

Bachelor of Management in Information Management | Southwestern University of Finance and Economics Jul 2025

INTERNSHIP EXPERIENCE

AI Data Intern | Shanghai Yuepu Network Technology Co., Ltd | Shanghai, China May 2025 - Aug 2025

- Engineered an automated data reporting pipeline using Python to process API data and generate AI-driven text, reducing manual reporting time by 95% and ensuring timely data availability for stakeholders.
- Enabled proactive cost control by building a real-time monitoring bot using Python and DingTalk APIs that fetched platform data every 30 minutes, instantly alerting the finance team to spending anomalies.
- Accelerated data system development by 20% by designing technical mockups and data schemas in Axure RP, effectively translating operational requirements into clear specifications for engineering teams.

Data Analyst Intern | Shanghai Suanliyou Technology Co., Ltd. | Shanghai, China Jan 2024 - Feb 2024

- Influenced product strategy revisions by conducting funnel analysis on user behavior using SQL and Google Analytics, identifying a critical 73% drop-off point, and prioritizing optimization efforts.
- Established self-service BI solutions by designing automated Tableau dashboards to track real-time KPIs, including DAU and conversion rates, driving data visibility and faster decision-making for leadership.
- Ensured system stability and data integrity by developing automated regression test scripts using Playwright, streamlining the bug detection process for core product functionalities.

Data Analyst Intern | Zhejiang Tailong Commercial Bank Co., Ltd. Hangzhou, China Jul 2023 - Aug 2023

- Managed and analyzed large datasets (400,000+ records) using SQL, performing rigorous data cleaning and validation to support risk modeling initiatives.
- Developed a predictive score-based risk model to systematically assess customer risk by using Python (Pandas, Scikit-learn) for data processing, feature engineering, and logistic regression.
- Directed strategic planning initiatives by synthesizing competitive intelligence on AI adoption across 10 banks, delivering a report that identified three high-value integration opportunities for senior leadership.

PROJECT EXPERIENCE

Campus Delivery Service Website (Flask & MySQL) | Chengdu, China May 2024 - Jun 2024

- Launched a full-stack campus delivery service MVP, capable of processing real-time orders and tracking statuses, by developing the application using Flask, MySQL, and a responsive Bootstrap.
- Enabled data-driven service monitoring by creating a dashboard with JavaScript (FusionCharts.js) to visualize key metrics, including order volume and monthly trends.
- Streamlined the deployment process and improved scalability by configuring the entire project environment using Docker, resulting in a one-command setup for new instances.

The Impact of Age and Country on Scientific Feats with a Focus on the Nobel Prize | Chengdu, China Dec 2022 - Jan 2023

- Ensured high data quality for analysis by implementing rigorous data cleaning pipelines with Python (Pandas) to process 900+ complex historical records, achieving 98% dataset accuracy.
- Uncovered key drivers of scientific achievement by conducting exploratory data analysis (EDA) and generating statistical visualizations (histograms, box plots) to identify significant demographic correlations.
- Built and deployed an interactive real-time data application, receiving positive feedback for clarity and depth, by using Streamlit to present findings and allow user-driven exploration of the dataset.

LEADERSHIP & VOLUNTEER EXPERIENCE

Teaching Assistant | MISY330 - Database Management | Chengdu, China Feb 2025 – Apr 2025

- Led weekly review sessions and provided one-on-one mentoring to 50+ students in advanced SQL.
